Sustainable partnership strengthens the future of WORLD OF FIREPLACES

WORLD OF FIREPLACES has established itself as an integral part of the international fireplace industry. With its third edition from 13 to 15 April 2027, the trade fair is once again consolidating its role as a central industry meeting place and international trade fair platform for manufacturers, retailers, and trade visitors.

Expert and strategic partners are essential for the consistent market-oriented alignment of such a B2B format. From the outset, the HKI industry association has provided content and strategic support for the trade fair, advising on future issues and visions and playing a key role in ensuring that the event remains consistently aligned with the requirements of the industry and market participants. In economically challenging times, this is an important factor in the market-oriented further development of the format. To further consolidate this successful cooperation, the role of the HKI as a conceptual sponsor will be emphasised even more strongly in the future. The sustainable alliance underlines the trade fair's claim to act as a permanent international industry meeting place for fireplaces – in line with its guiding principle: the fireplace to be.

WORLD OF FIREPLACES 2027
13–15 April 2027 | Leipzig Messe | Hall 5 | Germany

WORLD OF FIREPLACES – the fireplace to be

The international trade fair for fireplaces, WORLD OF FIREPLACES, brings together expertise in all aspects of comfort and warmth. Manufacturers and suppliers from all over the world present their products and services in an environment that is specifically tailored to the requirements of the industry. The exhibitors, ranging from industry leaders and medium-sized companies to promising newcomers, showcase a wide range of products: from pellet, tiled and storage stoves to electric fireplaces and wood-burning stoves, decorative fireplaces, cookers and barbecues to outdoor fire pits and outdoor kitchens. The range is complemented by exhaust systems, separation and control technology, fuels, insulation materials and accessories, ceramics, and fireclay, as well as software for smart homes and system control.
